FULL SIZE SMART CARD READER

The fast growth of electronic frauds and data theft is making security a major issue in the ICT sector. The safest solution is currently represented by the adoption of public key infrastructures (PKI) and therefore digital certificates held into cryptographic smart cards. Such scenario is leading to a large diffusion of smart card readers.

It is ideal to be used into public key infrastructures where smart card holding user's identities are used to grant logical access to resources to particular applications or to digitally sign electronic documents.

No technical knowledge is required to use the miniLector EVO as is a plug&play device, ready to be used in a matter of seconds.

Large projects covering different ICT aspects such as digital signature, e-Government, e-Banking, e-Healthcare, Public Key Infrastructure use the miniLector EVO as smart card reader.

Our experience and knowledge alongside a large diffusion of miniLector EVO contributes to its being highly reliable and affordable.
